Recent FinTech Trends

What happened in the Fintech ecosystem since the beginning of 2022?

Fintech investments are slowing down from 2021 highs, with **total investments in H1 2022 of \$13.2b**, the lowest 6-month total since 2020.

Fintechs' valuations have dropped. **Klarna is valued at \$6.5b** (\$45.6b in Jun 21), while **Stripe cut its valuation to \$68.4b** (\$95b in Mar 21). The overall valuations are still growing.

Despite investment decrease, **Fintech is expected to remain a strong focus for investors**, who will focus more on profitability and cash flows.

Checkout.com raised 2022's largest European fintech round

Top 10 fintech fundraising rounds in Europe to date in 2022

Payments continues to attract the most funding

Amount raised by fintech sub-sector in 2022 to date

Sub-sector	Amount raised
Payments	\$3.8bn
Wealth management	\$3.4bn
Banking	\$2.9bn
Financial management solutions	\$2.7bn
Mortgages & lending	\$2.2bn
Insurance	\$1.4bn
Crypto and DeFi	\$1.3bn

Recent FinTech Trends: European Perspective

What are the biggest Fintech trends in EUROPE?

Digitization of **B2B payments** enabled by the adoption of **Open Banking in Europe** is underway. Yet there is still a great deal of complexity in adopting the technology on a wider scale.

Payment infrastructure for digital business

AR automation

B2B BNPL & Financing

B2B checkout

AP automation

- The pandemic pushed businesses online, boosting B2B payments growth, which is estimated to reach **\$640b** by 2030 with a CAGR of 9.4%.
- B2B payments are expected to be **5x larger** than B2C in terms of volume by 2028.
- Yet, certain constraints limit B2B transactions to be as frictionless as B2C sales including higher *price sensitivity* (transaction fees), *procurement & permissions* needed, and payments with a *deferred payback period/credit*.

Recent FinTech Trends: European Perspective

What are the biggest Fintech trends in EUROPE?

2021 was a record year for **cybersecurity** startups globally, and in 2022 the momentum continues. Banks are doubling down on their security budgets this year to protect against cybersecurity threats.

Category	Offering	Companies
Threat Detection & Protection	Vulnerabilities Management / Security Policies Dev.	 GATEWATCHER
Fraud Detection	Client's Fraud Detection	SHIFT
Attack Simulation	Human Risk Management / Awareness Trainings	 sosafe
Data Protection & Recovery	Data Loss Prevention / Disaster Recovery	Acronis
Cyber Insurance	Data Collection for Better Cyber Insurance Pricing	 panaseer

Recent FinTech Trends: European Perspective

What are the biggest Fintech trends in EUROPE?

CFO tools for SMBs empower CFOs to replace tedious tasks with automation, enabling collaboration and aggregation of multiple tools under one umbrella.

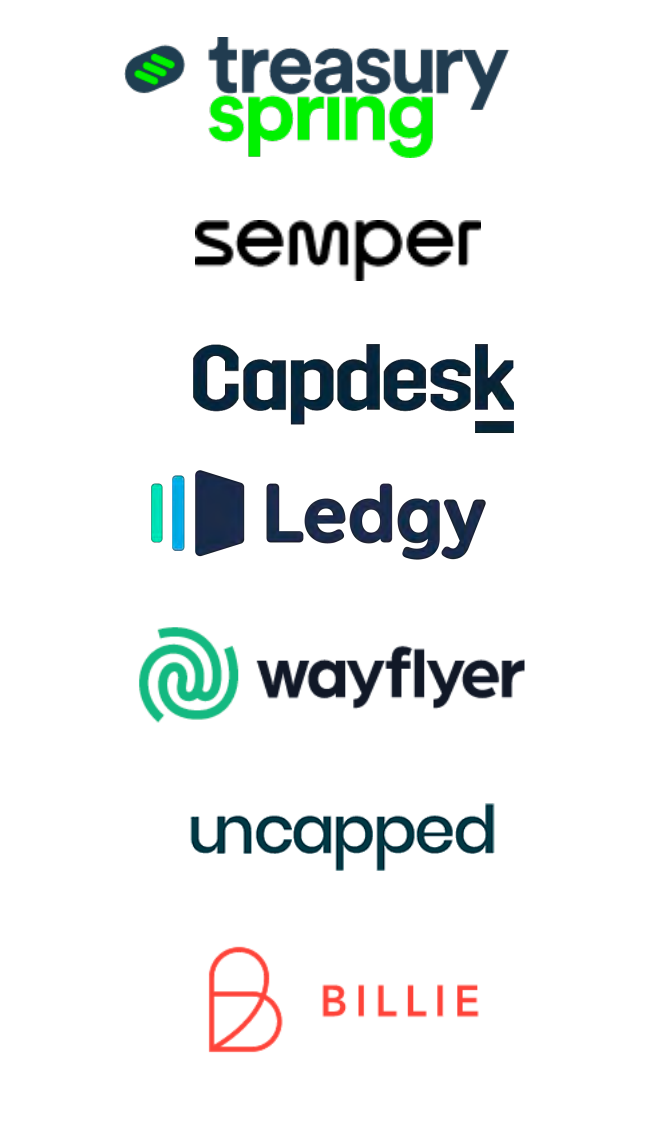

Controllership
Accounting / Expense Management

FP&A
Cashflow Management / Planning

Treasury
Treasury / Equity / Financing

- Europe is the second biggest global finance and accounting market expected to hit €921m by 2025.
- Germany is the largest European market in the space, making up around 50% of the value.
- VCs have poured a record amount of \$66.5m into European CFO tech stack startups this year.
- Each EU country has its own accounting methodologies and tax regulations, hence building a one-stop-shop fits it all is a challenge.

PLUGANDPLAY

InsurTech Trends

PLUG AND PLAY INSURTECH

New technologies are transforming the insurance value chain for good, and we are taking this industry into a new space.

Since the inception of the Insurtech program in May 2016, we have brought together the best startups and largest insurers into one innovation platform.

Some of the Insurance Trend Areas

Enabling Technologies

Artificial Intelligence / Machine Learning

AI & ML are the new data analysts of tomorrow.

In real-time and continuously improved accuracy, these models enable companies to give a feeling of complicity to each one of their customers through high-personalisations and increased presence in various areas of their life.

Image Processing

Image processing enables the customer to communicate without needing to utter a word.

Customers can share data in real-life with less effort and enable insurance companies to have a better trust with them by helping them in a fast, relevant and reliable way

Augmented Reality

AR is a technology that mixes the physical and digital worlds.

It is of very interactive nature and enables a better transmission of complex topics from the seller to the buyer and an opportunity for insurance companies to be a trusted and relied upon support.

Internet of Things

Long gone will be the days that insurance companies only get sporadically contacted.

With IoT, companies can have many touchpoints in many different moments and areas of the user's life. With such data analysis possibilities, prediction & on point product offers will become evident.

Drones / Satellites

In combination with image processing, drones are an advanced tool to make real-time assessments in high-risk & damage areas and effortless, continuous monitoring for predictive analysis and valuable data collection.

Drones are the gateway to a bird's view analysis of a situation.

Blockchain

Blockchain is disrupting many industries. It enables a secure, automated and transparent data transmission through its decentralized nature.

For customers this translates into trust and data control coupled with speed and efficiency.
